Profile

Currently, I am working as a backend developer at PT. Timedoor Indonesia. As a Backend Developer, I have successfully contributed to several projects over the past few years, focusing on building admin panels and APIs for mobile applications. My expertise spans the full development lifecycle, from designing efficient and scalable databases to launching projects. I work closely with designers to analyze and refine database designs, ensuring optimal relationships between tables and alignment with the requirements of both mobile and web applications.

I bring a strong aptitude for fast learning and adaptability, enabling me to quickly embrace new programming languages, tools, and frameworks to meet project requirements. My ability to handle multitasking environments allows me to manage multiple projects or tasks simultaneously while consistently delivering high-quality results. As I continue to grow my expertise in backend development, I am increasingly focused on machine learning and advanced technologies. Driven by a passion for innovation, I actively seek out new methodologies and leverage third-party tools to develop creative and impactful solutions.

Additionally, I am dedicated to improving my communication skills to enhance teamwork and collaboration. I believe that strong communication is essential for fostering solid team dynamics and enabling collective growth. By strengthening this ability, I aim to contribute to a dynamic work environment that supports the development of both the team and the company.

Education

Bachelor Of Technology Information, Udayana University	07/2016 – 08/2020
Smart Technology Concentration	Badung, Bali

Work Experience

Fullstack Developer, PT. Danaco Solusi Global	10/2019 – 09/2020
Assist with maintaining the POS project and developing new features	Denpasar, Bali
• Redesigned the frontend of the POS website using Bootstrap for a modern and responsive interface. • Developed additional layouts in an existing Android application based on specific requirements. • Created and integrated APIs to support application features and layouts effectively. • Visited client stores to identify and resolve monitoring issues on-site.	

Backend Developer, PT. Timedoor Indonesia

10/2020 – present
Denpasar, Bali

Maintain existing projects, new phases or create new projects and contributing to team growth.

- Analyze the design system from the User Interface (UI) perspective and develop a corresponding database schema.
